My workflow involves opening and managing the library first, and then opening and managing images second. I don't have a huge problem with the new editing features, so I decided to use the non-Basic mode: I started on a new, untitled, 0-pixels-sized image and, using the multi-select tool, I selected a couple of options, create a collection, and select a couple of areas in the image. Lightroom 5 makes it easy for me to process raw files. You can choose to include them in the catalog process, or keep them separately. I found this workflow to be easy, but actually I haven't used it until now because I have used Raw Therapee for many years. So, why use Lightroom 5 with raw files and not Raw Therapee?

Remember to type in the command you want to use, or you'll have to go into the individual option to find the one you would like to utilize. I normally just press **Command key** by itself for some quick access when creating graphics or to make step changes. One of the many things that has made Adobe Photoshop a success is that they have brilliantly intertwined the functions and letting you use as many or as few as you'd like. You can use a lot of them backwards without an issue. You can create text with the Type Tool, place it on a path, and then create a new image above it. If you want to change the text, you can simply make the duplicate layer and change it to a new type of font you'd like. To get Photoshop to work the best it can, you must ensure that your graphics and photography are in their native "ProPhoto" format. If not, you may find that many of the tools you would like to use won't work the best. Each tool can give you informative options on each of the tabs you'll see in the window. Setting a canvas size is your best bet to ensure that the elements you're working with fit within the page as necessary. Should your graphic be oversized or too much large than what your page can hold, you can actually scale it down to fit while maintaining the proportions. If you're working in Photoshop before making it into a final product, you can scale the graphics down on a regular basis to ensure you are putting the most information into your page. 933d7f57e6
