I'm getting a fatal error every time I try to compile. I don't think I'm using the "return" statement properly. The "show_row()" function calls another function in order to fill out the rows, but returns the value of the function. I then attempt to return the show_row() function. "get_cols()" returns a counter, and the show_row() function updates it. Is this a common error? function table(\$table, \$columns, \$rows, \$header = FALSE, \$filename = NULL) { \$this->table_name = \$table; \$this->row_limit = (\$rows + 1); \$this->columns = \$columns; \$this->header = \$header; \$this->filename = \$filename; \$this->db
