They work like any other plugin in that they have a number of settings, but the best way to understand it is by playing around with it in your photo. What makes these plugins so great is the fact that you don't have to manually apply filters to an image. All you have to do is add the tools of your filters presets, adjust the settings, and start adding your layers. After that, you have custom, perfect designed filters that you can create instantly. The biggest deliverable from the 'NEAT' (Neural-Networks-as-a-Toolkit - powered by Adobe Sensei) is the AI-driven filter. In the AI-driven filter workspace, you can use the same neural network filters found in the AI-driven filters that run on the Adobe Sensei API as part of the companion API. So, you can work on your images just like you could use them in the past. And it can help you take your photos to the next level! Simply explore the new workspace by clicking Filter > AI-driven filters. The addition of the 'Photomatix' feature is one that will literally blow your mind. The delivery of the tool has been through many stages since it was first launched by the company. It allows you to choose the best from the various sensors, add stunning enhancements directly to your images for increased sharpness and more, enhancing them significantly.
