If you do sign up for those services, then you can purchase additional software, such as the Photoshop Elements software. On Tuesday, Adobe announced that Lightroom 5, along with its companion software, Lightroom CC, would kick off on Aug. 9. I was a little surprised but not disappointed a little bit. I've always been amazed at Adobe's drive to incorporate new digital cameras into its software. Not to mention, photographers have been using these "tools" since before most of us were born. OS restrictions are not the only changes. Lightroom 5 wants a bit more hard disk space with 2 GB's versus 1 GB for the version 4. I personally think that, today, such a requirement is not really relevant, because virtually everyone will have that amount of free disk space and more. For what it's worth, my Lightroom 5 directory does take up a little bit more space than that of Lightroom 4.3 (0.99 GB vs 860 MB). There are more files in it, too, by around a thousand. Lightroom takes up additional disk space while working by creating temporary files. Catalog sizes stay about the same after the upgrade, with catalog sizes changing by 1-2% (up or down), depending on the size of the catalog. More importantly, Adobe now recommends twice more RAM when using Lightroom 5 than it did with the previous release. The minimum requirement is still 2 GB of RAM. This surely indicates the new version is somewhat more resource-hungry. However, I haven't noticed any significant performance changes except for those described in the "Performance Issues" section of this review. I would have expected Adobe to improve Lightroom's usage of available resources to make it operate faster, especially when it comes to Importing/Exporting images. That said, I am still generally happy with how snappy Lightroom is. It's just no better than Lightroom 4 in my opinion.
